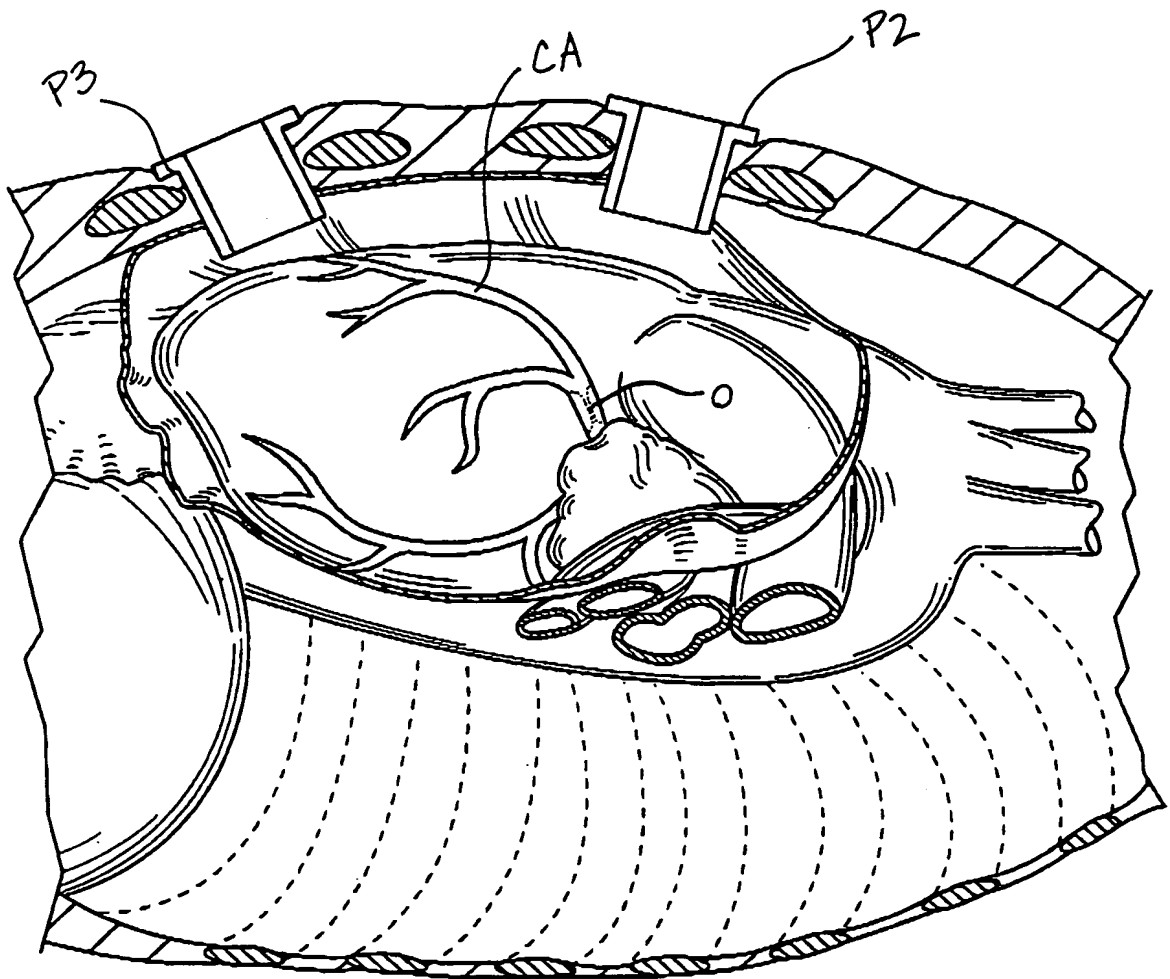

FIG. 23A

A schematic diagram of a medical device for treating a heart. The device includes a catheter with a distal electrode (304) and a proximal electrode (300). The catheter is inserted into the heart (302) through a sheath (306). The proximal electrode (300) is connected to a power source (P2) and a control unit (P3). The distal electrode (304) is connected to a power source (P1) and a control unit (P3). The catheter is also connected to a control unit (P3) via a control line (308). The catheter is shown in a cross-sectional view, with the heart (302) and surrounding tissue (306) visible. The catheter is inserted into the heart (302) through a sheath (306). The proximal electrode (300) is connected to a power source (P2) and a control unit (P3). The distal electrode (304) is connected to a power source (P1) and a control unit (P3). The catheter is also connected to a control unit (P3) via a control line (308). The catheter is shown in a cross-sectional view, with the heart (302) and surrounding tissue (306) visible.
